SAMPLE RESPONSE: LETTER OF DISCHARGE

10 February 2014

Dear Ms Ponsford,

Re: Lionel Ramamurthy (aged 63), for discharge from Newtown Public Hospital on 11 February 2014

Mr Lionel Ramamurthy was admitted on 4 February 2014 having contracted pneumonia. He is now ready for discharge back into your care.

On admission, he was experiencing fevers and rigors. He suffered dyspnoea, wheezing and sleeplessness. He had chest and abdominal pain due to prolonged persistent coughing.

After a week in hospital, he has stabilised and his breathing problems are now resolved. However, he still experiences some chest and abdominal pain, with a dry cough. His nursing management in hospital initially consisted of a walking frame and assistance with showering and dressing. Mr Ramamurthy is now more independent. He is also able to walk about slowly without assistance, and shower and use the toilet independently.

Mr Ramamurthy is on Voltaren for osteoarthritis. Paracetamol may be administered as needed if chest and abdominal pain persists and he should be kept warm. Please encourage oral fluids, and ensure that he sits up, rather than lies down, whenever possible to ensure postural drainage. He should ambulate regularly, and continue with deep breathing and coughing exercises.

Mr Ramamurthy was very weak on admission to hospital, but has gained weight with dietitian input. He will need ongoing monitoring of his diet to maintain a healthy BMI.

If you have any queries, please contact me.

Yours sincerely,

Charge Nurse
