Re: Mr Gerald Baker, aged 79

Dear Ms Bruin

Mr Baker is being discharged from City Hospital back into your care today. He underwent a left total hip replacement.

Mr Baker was recommenced on 100mg Aspirin daily post-operatively. In addition to his usual treatment for hypertension, he requires pain relief (Panadeine Forte, max 8 tablets/day) and daily dressing changes to preserve his skin integrity. He has good mobility and can walk along the ward using a wheelie-walker without difficulty. He is to undergo a series of range-of-motion, stretching and strengthening exercises, and occupational therapy, to ensure a full recovery. We are sending a walker and wedge pillow with the patient. Our social worker has organised hire of a toilet raiser for two weeks.

During post-operative recovery, Mr Baker appeared disoriented. As there is no record of dementia, this may relate to the anaesthetic; continued observation is nevertheless recommended. His sister may be able to comment. Mr Baker's haemoglobin dropped post-operatively. He was transfused three units of packed red blood cells, without complication, and his Hb on discharge is stable (112 g/dL). Please monitor for signs of anaemia.

Mr Baker will have his staples removed at City Hospital Clinic on 21 September. Follow-up blood tests (UEC, FBE) will also be conducted.

Please contact me with any queries.

Yours sincerely

Charge Nurse
