Newtown  

10 February 2019

Dear Dr Smith,

Re: Mrs Priya Sharma  
DOB: 08/05/58

Thank you for seeing Mrs Priya Sharma, a type 2 diabetic, for further management of her blood sugar levels.

Mrs Sharma was diagnosed with NIDDM in 1999. She has been monitoring her BP and sugar levels at home since then. She has a strong family history of diabetes and is allergic to penicillin. Her weight is steady (BMI of 24) and an eye examination in October 2017 indicated no issues.

She initially presented on 29/12/18 concerned that her blood sugar levels were no longer well controlled. Her BP that day was 155/100 and her recent sugar levels were ranging between 6 and 18mmol/L. Her medication included metformin 500mg b.d. and glipizide 5mg x2 mane. I instituted Atacand 4mg x1 mane.

A pathology report received on 05/01/2019 showed HbA1c levels of 10% and GFR greater than 60ml/min. Her cholesterol was high (6.2).

On 12/01/19, I prescribed Lipitor 20mg mane. I also increased her metformin regime to 750mg b.d. Since then, her home-monitored BP has been within range and her cholesterol has fallen to 3.2. Her non-fasting blood sugars are 7-8mmol/L, but her fasting blood sugar levels are usually in the 16+ range, which is high. Therefore, I am referring her to you for your specialist advice.

Yours sincerely,

Doctor
